

MAJOR INTERVENTIONS OF THE PROJECT

The following are the major interventions planned by the project.

- Improve climate resilient agroforestry and livelihood
- Improve water availability and water use efficiency
- Incorporate natural ecosystem restoration based actions for reducing impacts of landslides and floods
- Enhance technical capacity of GRB communities in maintaining and supporting climate resilient ecosystems
- Enhance community-based mechanism for planning, restoration, monitoring, and maintenance of ecosystems
- Incorporate ecosystem-based climate change adaptation approaches into government policies and plans
- Establish knowledge management system for climate resilient River Basin Management.
